

Kinetic Health – Full Marketing Strategy

A comprehensive plan to position Kinetic Health as the leading evidence-based post-operative and orthopedic rehabilitation clinic in New Cairo, targeting affluent, surgery-driven patients through strategic positioning, digital optimization, and surgeon partnerships.

Strategic Foundation

Positioning & Core Promise

Kinetic Health is a Class A, **evidence-based post-operative and orthopedic rehabilitation clinic in New Cairo**. It targets affluent, surgery-driven patients, with strong surgeon referrals and **"we speak science"** as the core promise.

The clinic benchmarks against leading physio brands (First Physio, I Move, PhysioTech, Levitate, Masoud, Massar) and uses El Khashab Clinic as a quality standard for branding and patient experience.

Core Promise

"We speak science" – every program and recommendation is evidence-based and tailored to the surgery and patient context.

Buyer Persona

Primary persona – Post-operative Class A patient

- Age 30–65, Class A/B+ residents of New Cairo and nearby compounds.
- Recently had, or is preparing for, orthopedic surgery (knee, shoulder, spine, hip) or has complex chronic spine issues.
- Often covered by private insurance; expects professional, clean, private environment.
- Values science, safety, results and reputation more than low price.

Decision Journey

surgery or MRI → surgeon mentions Kinetic or patient searches online → checks doctor profile, clinic photos and testimonials → fills a form or contacts clinic → assessment → commits to a structured rehab program.

Secondary personas

- Active adults / recreational athletes with sports injuries who want structured return-to-sport (not the primary focus).
- Corporate / insured employees looking for high-quality rehab within their insurance network.

SWOT Analysis

Strengths

- Class A location in Fifth Settlement with capacity for around 70 cases/day and current under-utilization (≈ 25 /day).
- Clear post-operative and orthopedic focus with specialized services (lymphedema, shockwave, electrotherapy, dry needling).
- Strong referral base from surgeons and word of mouth, indicating trust and good outcomes.
- Premium pricing and structured packages enable profitable acquisition while maintaining exclusivity.
- Existing personal-branding: the lead doctor already appears regularly on social media and in educational content.

Weaknesses

- Website and digital funnels are not yet optimized for program-specific conversions (no dedicated program landing pages, limited lead forms).
- Paid social currently relies mainly on messaging campaigns, with limited qualification and tracking from lead $\rightarrow$ assessment $\rightarrow$ program.

Opportunities

- Own the niche "scientific post-operative rehab in New Cairo" while many competitors are general physio, sports-only or based in other districts.
- Turn surgeon relationships into structured, trackable referral partnerships with joint communication and feedback.
- Scale doctor-led Arabic content on surgeries, rehab timelines and evidence to stand out from generic pain posts.
- Improve tracking, automation and qualification (lead forms and CRM) to reduce CPA and fill spare capacity.

Threats

- Multi-branch and well-known competitors with stronger brand recall and digital funnels.
- Discount-driven clinics that may distort expectations for patients who are not your ideal Class A segment.
- Rising advertising costs that punish inefficient campaigns.

Competitive Positioning

Clinic	Where they're strong	Gap for Kinetic Health
First Physio	Multi-branch, premium, performance-style branding in several upscale areas.	Less focus on post-op Class A in Fifth Settlement; Kinetic can be the trusted post-surgery rehab reference in New Cairo.
I Move	Strong sports-injury and athlete positioning with club partnerships.	Kinetic focuses more on surgical and complex orthopedic rehab with a medical/scientific angle rather than a gym angle.
PhysioTech	Strong website funnel and clear CTAs; specialized services and good booking flow.	Kinetic can replicate funnel clarity while owning "scientific post-op rehab in New Cairo" and maintaining a no-discount, premium stance.
Levitate	Professional, evidence-based brand with structured service pages.	Kinetic can combine evidence-based messaging with stronger surgeon relationships, Class A environment and Arabic doctor-led content.
Masoud / Massar	Active social pages with Arabic pain-solution content and community feel.	Kinetic can differentiate with more premium visuals, structured programs and clear post-op specialization.
El Khashab Clinic (benchmark)	High-end clinic with polished branding, advanced technology and strong testimonials; clear Class A experience.	Kinetic should match this level of branding, testimonials and landing-page quality, but in the physiotherapy/post-op category.

Brand & Messaging

Core promise

"We speak science" – every program and recommendation is evidence-based and tailored to the surgery and patient context.

Supporting messages

- "Your surgeon's plan, our rehabilitation science."
- "From operation to full function: structured post-op programs."
- "Class A rehab: private rooms, advanced equipment, scientific follow-up."

Tone of voice

calm, authoritative, empathetic; Arabic-first, with clear explanations in simple language.

Visual identity

medical, clean and modern; use surgery diagrams, progress charts, before/after function shots and high-quality clinic photos. Avoid a purely "gym" aesthetic.

Offers and Programs (no discounts)

Maintain current price levels; do not promote discounts or free assessments to avoid attracting non-Class-A segments.

Reframe packages as **structured programs** rather than "X sessions":

Knee surgery rehab program
(e.g., ACL/meniscus)

Shoulder surgery rehab program

Spine surgery stabilization program

Each program should have:

- Clear description of phases and expected timeline.
- Number of sessions and typical frequency.
- Functional goals (e.g., walking without crutches, stairs, return to work).
- Short case examples.

Website and Landing Pages

The current website communicates vision, mission and values well but is general. It needs program-specific pages and stronger conversion paths.

Actions

- Keep existing homepage as the main brand story.
- Create at least three high-quality landing pages, one for each flagship program.
- Key credentials and certificates of the clinical team.
- Video testimonials and screenshot-style feedback.
- Logos of insurance and corporate partners.
- Simple visual outline of program stages and typical results.

Each page should include:

- Short video of the lead doctor explaining who you are, what the program is, and what "we speak science" means in practice.
- Clear single CTA (book assessment via form / request a callback).
- Structured lead form collecting: name, phone, area, surgery type, surgery date, insurance name, and preferred contact time.

Digital Funnel and Campaigns

Funnel design

Campaign structure

- **Campaign 1:** Post-op knee program (ACL/meniscus) – objective: Leads.
- **Campaign 2:** Post-op shoulder and spine program – objective: Leads.
- **Campaign 3:** Lymphedema and swelling rehab – objective: Leads.
- **Campaign 4:** Retargeting – warm audiences (website visitors, video viewers) shown testimonials, program breakdowns and clinic tour.
- **Campaign 5:** Surgeon-aligned educational content – engagement/traffic to keep audience warm and build authority.

Each lead form should include qualifying questions (surgery, surgery date, insurance, area) to filter out low-fit leads early.

Social Media Strategy

General

The clinic already has active personal branding and good educational content. The next step is to align content with the new programs and funnels.

Across Facebook, Instagram and TikTok

- Ensure bio/about sections clearly state: post-operative and orthopedic focus, New Cairo location, "we speak science", and primary contact options.
- Use a link-in-bio (or main website link) that directs to a simple "programs" page or the most important active campaign landing page.

Content pillars

1. Doctor-led education

- Short Reels answering specific post-op questions by surgery type.
- Myth-busting clips about post-operative pain and rehab timelines.

2. Program explainers

- Reels or carousels that visually explain one program phase (e.g., "Phase 2 after ACL surgery").
- Clips filmed in the clinic showing exercises and equipment with a science explanation, not just demonstration.

3. Patient stories & testimonials

- Video testimonials recorded at the clinic.
- Screenshot posts of positive messages (with identities protected where needed).
- "Journey" posts summarizing a case from surgery to return to function.

4. Clinic & team

- B-roll of separate treatment rooms, equipment, and waiting areas to reinforce Class A experience.
- Short introductions to therapists and their credentials.

5. Surgeon & partner content

- Occasional joint posts where a surgeon explains the operation and the Kinetic team explains the rehab plan.

Social-to-funnel integration

- Pin one Reel per program that explains the program and includes a clear CTA (form link in bio / "send us your number via link").
- Frequently reference the programs and landing pages in captions, not just "call/WhatsApp."
- Use Stories to remind followers about programs and share real-time testimonials and clinic shots.

KPIs, Partnerships & 90-Day Action Plan

Social proof and reputation

- Implement a routine where, at the end of each program, patients are invited to: Record a short video about their journey, or Allow use of their written feedback as a public testimonial.
- Create a "Success Stories" section on the website and highlights/album on social channels.
- Place QR codes in the clinic linking to Google and Facebook review pages and ask satisfied patients to leave reviews while still on site.

Surgeons and partnerships

- Maintain a structured list of referring surgeons and key hospitals.
- For each, define: Standard referral format (what information is sent with the patient). Progress update template sent at agreed milestones. Opportunities for joint educational content or small events.
- For insurance and corporate partners, ensure their logos and participation are visible across website and key landing pages.

KPIs and targets

Awareness

Impressions and video views in New Cairo segment. **Target:** 50,000–70,000 relevant impressions per month during first three months.

Leads

Number of leads and cost per lead for each campaign.
Target: CPL that supports a cost per acquired program below roughly 1,500–2,000 EGP.

Qualification & booking

Percentage of leads meeting persona and clinical criteria.
Percentage of qualified leads who book an assessment.
Targets (first 3–6 months): 40–50% of leads qualified. 60–70% of qualified leads booked.

Clinic conversion

Percentage of assessment attendees who purchase a program. **Target:** 60–75% conversion.

Capacity

Daily active cases vs 70-case capacity. **Target:** grow from about 25/day to 43–57/day (60–80% utilization) within 6–9 months.

Detailed 90-day action plan

01	02	03
Weeks 1–4 – Foundation Objectives: finalize offers, build landing pages, launch initial lead campaigns. Finalize clinical design and communication for knee, shoulder and spine programs. Build three program-specific landing pages on the website, each with: doctor video, structured lead form, credentials, testimonials, and insurance logos. Implement a simple CRM/Google Sheet tracking every lead through stages: Lead → Qualified → Booked → Attended → Program bought. Launch Lead Campaign 1 (post-op knee) and Lead Campaign 2 (post-op shoulder/spine) with qualifying questions. Align weekly content to these two programs (at least two doctor-face Reels and one testimonial/journey post each week).	Weeks 5–8 – Optimization Objectives: improve campaign efficiency and strengthen social proof. Review campaign performance: CPL, qualification rates, bookings, program sales. Adjust targeting, creatives and forms accordingly. Launch Lead Campaign 3 (lymphedema program) and Retargeting Campaign 4 (warm audiences). Collect at least 5–10 strong testimonials and integrate them into landing pages, social posts and retargeting ads. Standardize internal scripts for qualification calls to improve conversion from lead to booked assessment.	Weeks 9–12 – Scale Objectives: scale winning campaigns and refine patient experience. Shift budget towards the best-performing campaigns and ad sets; pause or rework underperformers. Refine landing pages using insights from customer questions and user behavior (add FAQs, more testimonials, clearer CTAs). Launch Engagement Campaign 5 featuring educational and, where possible, surgeon-collaboration content to nurture the audience. Aim to reach around 40 active cases/day by the end of this phase, with trends pointing upward toward 60–80% capacity utilization in the following quarter.
